

GOPAL KRISHNA JS

Bengaluru, Karnataka

☎ +91 8050283766 ✉ gopalkrishnajs@proton.me 🔗 linkedin.com/in/gopalkrishnajs 🌐 github.com/Kr1szz

SUMMARY

MCA student with strong foundations in **Computer Networks**, **Data structures** and **Adobe Suite for Graphic Designing**. Experienced in Python, Java, C, and C++. Certified in AI, data analytics with a keen interest in **software engineering and network systems**.

TECHNICAL SKILLS

Languages: Java, Python, C/C++, SQL (MySQL), JavaScript, HTML/CSS, R

Tools: Git, Docker, Linux, AWS, GNS3, Figma, Adobe Suite

Libraries: Pandas, NumPy, Matplotlib

EDUCATION

RV College Of Engineering

2025 – 2027

Masters in Computer Applications

Current SGPA: 8.63/10

Sri Bhuvanendra College

2022 – 2025

Bachelors in Computer Application

CGPA: 9.0/10

PROJECTS

Open Audit (AI Financial Auditing Platform)

2026 – Present

React, Node.js, PostgreSQL, Gemini API

- Architected an AI-driven auditing system to extract structured financial data from invoices and receipts using LLM-based pipelines.
- Designed and implemented a rule-based computation engine for automated tax calculation and anomaly detection.
- Built scalable RESTful APIs for audit reporting, fraud detection, and financial insights delivery.
- Integrated Gemini API to classify and validate financial records with contextual reasoning.

SD-WAN Hospital Network Simulator

Jan 2026 – Present

Python, Flask, React + Vite

- Designed and implemented a real-time SD-WAN network simulation to model hospital network traffic.
- Built an interactive topology visualizer representing hospital departments with live traffic updates.
- Simulated DDoS attack scenarios to analyze network behavior under abnormal load conditions.

Football Analysis

2025

Python, YOLOv5, OpenCV

- Built a computer vision pipeline using YOLOv5 to detect and track players and the ball in match footage.
- Implemented frame-by-frame object detection to extract spatial and temporal player movement data.
- Generated performance metrics such as player positioning, movement patterns, and ball possession trends.
- Visualized match insights using Matplotlib to highlight tactical patterns and player heatmaps.
- Processed and cleaned large video datasets to improve model accuracy and detection consistency.

CERTIFICATIONS

- Mobile App Development with Flutter — Infosys Springboard (2026)
- AWS Cloud Technical Essentials — Amazon AWS (2026)
- Introduction to LLMs and Prompt Design — Google Vertex AI (2024)
